Debugging 400 Bad Req...
Let me start by examining the "New Request" tab to understand its current configuration and the 400 error.
I can see the issue clearly. The response body shows:
{"status":"error", "message":"ID tidak valid","data":null}
The error message "ID tidak valid" (Invalid ID) points directly to the dokter field. The value in the request body is:
"dokter": "6ae49f4554f0726fcf705844"
Waiting for approval...
